

Project

„Development and production of large displays for representation of operative key data“ (2004)

Customer:

Globus Logistik und Service GmbH, Bingen/Germany, www.globus.net
in cooperation with My-Tronic GmbH, Morbach/Germany www.my-tronic.com

Description:

At a 2100mm x 1480mm display panel it is possible to display ticker in combination with 12 pieces 4 – 8 digits numerical values.

The ticker in 7x80 dots (single color red) of the message board can be programmed by the PC-software with any kind of text.

The numerical values optionally can be switched to red, yellow or green.

(Another option: after defining limit values by PC, the color switches automatically)

There can be displayed up to 5 datasets rotational. (up to 25 characters text + 12 numerical values per dataset)

After transmission by the PC, data keep stored durable (even at mains power failure), till the values get updated.

Technical characteristics:

Housing	: aluminium profile screwed with 3mm front- and rear plate
Protection class	: IP 54
Dimensions:	: 2100 x 1480 x 80 mm ³
Power supply:	: 230VAC/ max. 0,8 A
Interfaces	: RS232, ethernet (optional)
Numerics	: 7-segments, 76mm red, yellow, and green (plexiglass filter in grey-transparence)
Ticker	: 7x80 dots red (14 characters presentable simultaneous), 100mm high.
